

I CLAIM:

1. A memory card reader comprising a housing which has at least a slot for receiving a memory card, wherein said housing is formed with a chamber for receiving at least a memory card, said chamber being
5 provided with a cover adapted to be engageable with said chamber thereby enabling said chamber to be opened or closed as required.
2. The memory card reader as claimed in claim 1, further comprising a frame mounted on said chamber and formed with a recess, said cover having a side formed with a protuberance which is configured to be
10 engageable with said recess thereby enabling said cover to be kept closed on said frame as required.
3. The memory card reader as claimed in claim 1, wherein said chamber is formed with two aligned holes, and said cover has two aligned pins at two opposite outer sides thereof adapted to be pivotally connected
15 with said aligned holes.
4. The memory card reader as claimed in claim 1, wherein said housing has additional slots for receiving compact flash cards, smart memory cards and secure digital cards.
